

PROFESSIONAL SUMMARY:

Technical Program Manager with 12+ years leading cross-functional engineering, product, and operations teams across aerospace hardware/software, systems engineering, and AI-enabled delivery. Known for turning technical ambiguity into execution plans, removing blockers, and improving delivery flow across complex programs.

WORK EXPERIENCE:

The Boeing Company

- Technical Program Manager – Regression Analysis & Systems Delivery Team September 2024 – Present
- Lead technical program execution for aircraft software and hardware regression analysis, coordinating cross-functional review board activities required to approve test plans, impacted stakeholders, verification results, and aircraft load readiness
 - Facilitate the Regression Analysis Board by aligning system owners, lab teams, suppliers, SMEs, and program stakeholders while removing execution blockers related to lab availability, process requirements, stakeholder readiness, board expectations, and action closure
 - Automated portions of SME-facing status reporting using an internal AI tool powered by the ChatGPT API, improving consistency, reducing manual reporting effort, and increasing visibility into verification progress and open actions
 - Streamlined the process workflow from a waterfall-style process into a hybrid execution model, reducing average nominal flow time from 89 days to 62 days while improving stakeholder alignment, reporting consistency, and process repeatability.

- Systems Engineer – Quantum Systems April 2022 – September 2024
- Performed functional use case analysis and decomposition using MBSE tools such as Cameo
 - Responsible for requirement development, derivation, and maturation through controlled processes using DOORS

- Technical Lead Engineer – Propulsion & Pump Systems April 2020 – April 2022
- Delivered propulsion system projects from concept through integration, coordinating internal teams and external vendors across design, integration, testing, and on-orbit support
 - Led delivery of cross-functional milestones by aligning engineering, design, and supplier teams, while proactively resolving interdependencies and roadblocks
 - Owned long-range technical planning and roadmap inputs for propulsion product development, aligning resource needs, delivery priorities, and R&D initiatives with business objectives
 - Managed a team comprised of 14 engineers, optimizing resource allocations to improve program lead times and efficiency

- Technical Program Manager – Platform Module Subsystems Dec 2017 – April 2020
- Managed a \$225M portfolio of 14 programs, leading cross-functional hardware and software delivery while maintaining stakeholder alignment through executive reporting on roadmaps, financials, EVM variances, and key performance metrics
 - Delivered multiple new product development efforts on schedule while realizing \$7M in cost savings against an initial \$48M program budget through test-reduction strategies and process descopes
 - Created workflow metrics to track product readiness, improve delivery velocity, and reduced our recurring bid costs by 7%
 - Facilitated value stream mapping workshops that resulted in reduced touch labor by 100 hours per program on average

- Product Owner – Propulsion Products May 2014 – Dec 2017
- Owned development and delivery of propulsion product lines, balancing performance, schedule, cost, supplier execution, and technical compliance across product lifecycle milestones
 - Led vendor sourcing, trade studies, contract negotiations, nonconformance resolution, and performance validation
 - Used Python, MATLAB, and Excel VBA to analyze hardware and system-level performance, surface design risks, and support technical decisions across engineering and program stakeholders

ADVISORY AND INDEPENDENT PROJECTS:

Beehive (AI-Powered App Development Startup)

- Consultant Technical Program Manager (Part Time) January 2025 – November 2025
- Supported an early-stage AI startup building a no-code app-generation platform, helping structure roadmap planning, MVP scope, sprint execution, and delivery visibility across a founder-led team and 3–5 contractors
 - Coordinated delivery across AI agent integration, frontend development, deployment, authentication, billing, and infrastructure workflows using modern software tooling including Next.js, GitHub, Vercel, Neon DB, and Claude API
 - Sequenced phased MVP delivery across core product modules by translating founder priorities into roadmap artifacts, user journeys, feature-prioritization boards, milestones, dependencies, and go-to-market planning

EDUCATION & CERTIFICATIONS:

M.S., Astronautical Engineering, University of Southern California (USC)
B.S., Aerospace Engineering, California State University, Long Beach (CSULB)
Project Management Professional (PMP), Certified Scrum Master (CSM)

SKILLS:

Technical Program Management • Agile Delivery • Jira • Confluence • DOORS • MS Project • GitHub • Vercel • Next.js • Python • SQL
